## EDUCATION

---

**New York University**  
*M.S. in Quantitative Management*

**New York, NY**  
5/2026

**Massachusetts Institute of Technology (MIT) — Applied AI & Data Science Program**  
*Focus: Machine Learning & Deep Learning (neural networks, predictive modeling in Python)*

**2026**

**Rutgers Business School**  
*B.A. in Business Administration, Data Analytics Concentration*

**New Brunswick, NJ**  
12/2021

## WORK EXPERIENCE

---

**New York University — Costing & Analysis**  
*Senior Data Analyst*

**New York, NY**  
5/2022 – 5/2026

- Owned and maintained an operational reporting suite in Power BI (data modeling, advanced DAX, Power Query), delivering reports that supported receivables, cash, spending, and performance management for leadership and Principal Investigators.
- Partnered with leadership, Principal Investigators, and fiscal officers to translate vague, ad-hoc questions into clear data requirements and reports stakeholders would actually use.
- Wrote and optimized complex SQL in Snowflake to extract, transform, and validate data from multiple source systems, migrating from SQL Server and driving toward a single source of truth.
- Built financial models quantifying the impact of the NIH overhead-rate cut and forecasting run-rate for terminated and at-risk awards, informing leadership planning and the university's overhead-rate negotiation.
- Developed a billing-rate model for university space rentals, incorporating interest, depreciation, and operations & maintenance (O&M) costs to set cost-recovery pricing for external entities.
- Built and documented repeatable data pipelines as business liaison between Finance and IT, delivering ~3 RPA solutions and an automated ETL pipeline into an Azure Data Lake that eliminated manual reporting steps.
- Built an AR aging dashboard in Power BI using advanced DAX, driving sponsor receivables from \$18M to \$3M over two years and improving cash performance.
- Designed a Principal Investigator dashboard and low-spend report in Power BI, accelerating spending velocity by 20% by surfacing underutilized grants — a measurable operational improvement.
- Designed and built a full invoicing and reporting application in Microsoft Access, automating recurring financial reporting.
- Monitored data quality and flagged anomalies proactively, resolving inconsistencies at the source while setting reporting standards and standardizing metric definitions across teams.
- Delivered ad-hoc analysis alongside production reporting on cadence; mentored junior staff and authored 20+ process documents to enable cross-training and consistency.

**Precision Pain & Spine Institute**  
*Financial / Billing Analyst*

**New Jersey**  
9/2020 – 4/2022

- Designed Power BI dashboards to trend revenue, provider productivity, and case profitability across a multi-specialty physician group (pain management, chiropractic, physical therapy), partnering with leadership on KPI definition and executive reporting.
- Managed revenue cycle analytics for the 10-physician group, optimizing billing workflows and reducing claim denial rates.
- Resolved \$17M in outstanding debit balances through systematic analysis, variance investigation, and targeted collection strategies.
- Led appeals for 2,000+ insurance arbitration cases, achieving a 50% profitability rate via data-driven prioritization and analytical modeling.
- Led a financial system implementation, reconciling \$20M+ across 15,000+ transactions while ensuring accuracy, regulatory compliance, and audit readiness.

**Precision Pain & Spine Institute**  
*Billing Specialist*

**New Jersey**  
12/2018 – 8/2020

- Captured \$10M+ in revenue through charge-capture and claim-submission workflow optimization, ensuring compliance with billing regulations.
- Reduced insurance claim backlog by 20% within one year via Excel-based tracking systems and targeted denial resolution.
- Improved 60-day collection rates by 20% across all insurance payers through a structured project-planning roadmap and process improvements.
- Enhanced revenue recognition accuracy by 25% through database optimization using advanced Excel (pivot tables, VLOOKUP).

## SKILLS & CERTIFICATIONS

---

**Technical:** Power BI (data modeling, advanced DAX, Power Query/M, report design), Snowflake (complex SQL), SQL Server (DBA), Oracle SQL, advanced SQL (window functions, CTEs, stored procedures), Python (Pandas, NumPy), R, advanced Excel (pivot tables, Power Query, complex formulas), VBA, Tableau, ETL (Alteryx, SSIS), Azure Data Lake, machine learning

**Certifications:** Google Data Analytics Professional Certificate, Advanced DAX, Data Engineering Essentials: SQL & Python, Complete SQL & Databases Bootcamp
